

## Cortical Mineralized/Demineralized Blend

- 70/30 Combination Cortical Allograft
- Universal allograft for all dental surgeries
- 65% bone formation after only 3 months<sup>1</sup>

Volume	Item Code
0.5cc	DM005
1.0cc	DM010
2.0cc	DM020

## Ideal Combination

The Maxxeus Dental Cortical Mineralized/Demineralized blend utilizes mineralized and demineralized bone to optimize bone regeneration. Mineralized bone provides an ideal osteoconductive scaffold for new bone growth, while the demineralized bone provides osteoinductive bone morphogenic proteins that stimulate bone growth. The two grafts working in conjunction have been shown to grow mature bone within 3 months<sup>1</sup>.

## Safety Assurance

All Maxxeus Dental Allografts are packaged sterile in a vacuum sealed borosilicate glass vial. Grafts are prepared using a patented bioburden reduction process when combined with terminal irradiation provides a sterility assurance level of 10<sup>-6</sup>. All donors are recovered and processed in the United States of America.
