

Resorbable Barrier Membranes

Pericardium

- Ideal barrier for GTR and GBR procedures
- Thin and flexible, yet strong enough to suture or tack
- Minimal memory - contours to ridge/graft site
- Superior choice to stiff xenograft collagen membranes
- Primary closure recommended

Length x Width	Item Code
1.0 x 1.0cm	DF101
1.5 x 2.0cm	DF152
2.0 x 3.0cm	DF203

Fascia

- Excellent protection for GBR/GTR procedures
- Thicker than pericardium while maintaining flexibility
- Strong collagen - holds a suture/tack if desired
- Alternative to collagen membranes
- Primary closure required

Length x Width	Item Code
1.0 x 1.0cm	DP101
1.5 x 2.0cm	DP152
2.0 x 3.0cm	DP203

Safety Assurance

All Maxxeus Dental Barrier Membranes are packaged freeze dried and sterile in a double sterile pouch with a five year shelf life. Grafts are prepared using a patented bioburden reduction process, and when combined with terminal irradiation provides a sterility assurance level of 10^{-6} . All donors are recovered and processed in the United States of America.
